

Between 1938 and 1971, several million pregnant women were given a drug to prevent miscarriages. **Then, it was a "miracle".**

**Now it's a problem.** Some of their sons and daughters, and the mothers themselves, may develop health problems from this drug, called DES. It's important to find out if you've been exposed.

To learn about possible health risks and preventive care,

contact The Southwest DES Center. **Call 1-800-DES-NEWS.**
